Module 15-A simple Introduction to Tailwind

15-1 Getting started with tailwind and build a button

What is tailwind CSS?

Tailwind CSS is self-described as **a utility first CSS framework**. Rather than focusing on the functionality of the item being styled, Tailwind is centered around how it should be displayed. This makes it easier for the developer to test out new styles and change the layout.

Add tailwind:

```
<script src="https://cdn.tailwindcss.com"></script>
```

15-2 Compare Tailwind classes with bootstrap classes

15-3 Tailwind Flexbox and compare with bootstrap

```
border-4 border-indigo-500/100 rounded-lg flex p-10 align-middle justify-center"
flex flex-wrap
```

15-4 Explore Tailwind grid with row and column span

```
<div class="grid grid-rows-4 grid-flow-col gap-4">
  <div>01</div>
  <!-- ... -->
  <div>09</div>
</div>
```

15-5 Penguin fashion overview and tailwind extension setup

15-6 Apply header with custom button and svg hero icons

Personal color=> bg-[hexa-color code]

15-7 Make header responsive, and set custom color

15-8 Setup custom card and card grid using tailwind css

15-9 Responsive grid and custom grid layout

15-10 How to select Right CSS framework for your project
